

1. What does RGBA stand for?

**RGBA stands for Red-Green-Blue-Alpha.
Alpha stands for the specification of the opacity of colour.**

2. From the Pillow module, how do you get the RGBA value of any images?

By passing `ImageColor.getcolor()` we will get the RGBA value of any image.

3. What is a box tuple, and how does it work?

**It is a tuple of four integer co ordinates that represents a rectangular image.
The first two integers represents the coordination of top left corner of the image and the
Last two integers represents the coordinates of the right bottom of the image.**

4. Use your image and load in notebook then, How can you find out the width and height of an Image object?

Import the Image module open the image using `Image.open()` and by passing `.size()` argument we can found the width and height of the object.

5. What method would you call to get Image object for a 100×100 image, excluding the lower-left quarter of it?

By using `Image.new('RGBA' , (100,100))`

6. After making changes to an Image object, how could you save it as an image file?

By using `.save()` argument

7. What module contains Pillow's shape-drawing code?

`ImageDraw` module contains Pillow's shape-drawing code.

8. Image objects do not have drawing methods. What kind of object does? How do you get this kind of object?

`ImageDraw.Draw()` method can be used to get drawing on image.
